

What is claimed is:

1. An economical data processing system, comprising:

means for forming a virtual space in use with a network which includes a plurality of computers connected to each other;

means for forming virtual currency which represents a value index in said virtual space; and

a virtual currency storing means for storing said virtual currency;

wherein said virtual currency is delivered in said virtual space.

2. The economical data processing system of claim 1, further comprising:

a valuable information storing means for storing valuable information representing value provided in said virtual space;

wherein said valuable information is delivered in said virtual space.

3. The economical data processing system of claim 2, wherein value of said valuable information is represented as value data, representing said virtual currency, in said virtual

space; and said valuable information storing means stores said valuable information in relation with said value data.

4. The economical data processing system of claim 2, wherein said valuable information is exchangeable with said virtual currency in said virtual space.

5. The economical data processing system of claim 2, wherein said valuable information is represented as value data, representing said virtual currency, in said virtual space; further comprising:

a valuable information evaluation means for evaluating a value of said valuable information so as to generate said value data of said valuable information.

6. The economical data processing system of claim 2, further comprising:

a ID data generating means for giving ID data to a subject which delivers said virtual currency in said virtual space.

7. The economical data processing system of claim 6, further comprising:

T05240-90224860

a ID data judging means for judging whether or not said subject is allowed to make a connection with said virtual space in accordance with said ID data, and giving a permission to said subject to make a connection with said virtual space when said subject has said ID data with authenticity.

8. The economical data processing system of claim 6, wherein said ID data generating means gives said ID data to a subject which delivers said valuable information; and said valuable information storing means stores said valuable information in relation with said ID data.

9. The economical data processing system of claim 6, wherein said virtual currency storing means stores said virtual currency in relation with said ID data.

10. The economical data processing system of claim 1, further comprising:

a virtual currency evaluation means for evaluating said virtual currency in a value system of real currency.

11. The economical data processing system of claim 10, further comprising:

09043206-04304
